Hi Ashwini,

Thanks for the submission, good work as of now but needs focus from the financier's POV rather than the user's.

My thoughts on your V1 submission - can you delve deeper into finding out the major problems faced by the financiers today from the 2W loan management pov and go deeper to solve 1 or 2 key problems from the product pov? You can consider TG as the NPA Head / manager of the financier, who ensures to keep the NPA (Non-Performing Assets) as low as possible in the present as well as in the future.

Would be great if you could also include some wireframes for the dashboard.

Feel free to let me know if you have any further questions, kindly submit it by Monday eod.

Thanks.

Respected Sir,

Thank you for the feedback on my V1 submission. I'll change my attention to the financier's perspective and provide solutions to the recommendation you made.  
Should I update these changes in my V1 solution or create a new V2 solution?

I will try my best to submit the updated version by Monday EOD.

Thank you for your guidance.

Regards

Ashwini Tayade
